

Daniel Battaglia

Core Competencies

Building distributed systems, infrastructure and frameworks, with a strong emphasis on code quality and performance

Languages

Scala, Ruby, C#, C++, Javascript, Typescript, SQL, Python

Technologies and Frameworks

PostgreSQL, SQL Server, MongoDB, Redis, Elasticsearch, RabbitMQ, Docker, .Net Core, Akka, AWS, Heroku

Experience

Elastic

Principal Software Engineer

Feb 2018 - Present

- Principal engineer on Elastic Cloud's Platform team
- Designed, architected and implemented several core features to the Elastic Cloud platform, including a major rewrite of the platform's authentication system in order to support external authentication providers, single sign-on, multi-factor authentication and fine grained access control
- Perform regular code and architecture reviews for both new features and bug fixes

Kontena, Inc

Software Engineer / Architect

Feb 2017 - Feb 2018

- Played a pivotal role in the design and implementation of an event-driven microservices architecture for the Kontena Cloud platform, expanding on the initial Ruby on Rails monolithic application
- Designed and developed a microservice used for realtime usage metering, to support billing for Kontena Cloud's various commercial services, such as hosted Docker registries, compute nodes and managed Kontena platforms
- Designed and implemented the backend for Kontena Cloud's realtime web-based management terminal shell, executing end user commands inside Docker containers connected to the browser over websockets

TMP Worldwide

Software Architect

Feb 2012 - Sept 2015

Lead Architect

Jan 2016 - Feb 2017

- Researched and implemented new technologies and patterns for improving the software platform, such as microservice architecture, actor model, and containerization
- Developed core shared application frameworks for performing common development tasks, such as authentication, authorization and organizational hierarchy traversal
- Created a robust asynchronous application messaging solution using RabbitMQ
- Designed and implemented continuous integration and continuous delivery strategies

ADP Lifion

Technical Architect

Sept 2015 - Jan 2016

- Worked as part of an agile team responsible for building a new authorization microservice for the companies' next generation software platform
- Researched potential data storage and data pipeline technologies for handling a large volume of transactional data, including Couchbase and MongoDB for storage and Apache Samza / Kafka for a data pipeline

Centris Group, LLC

Release Engineer

April 2008 - Sept 2008

Software Developer

Sept 2010 - Feb 2012

- Developed new product features for a large-scale education industry web application, deployed across multiple production environments
- Built and maintained the companies' automated build and deployment systems for a suite of .Net web applications

ConEst Software Systems

Software Developer

Sept 2008 - Sept 2010

- Developed new features for a customer-deployed client/server application, used by electrical engineers for project management and estimating
- Designed and developed a custom CI server application, used for automating the creation of deployment packages to customers and quality assurance engineers

Federated Payments

Software Developer

Sept 2007 - April 2008

- Developed web based internal-use tools for customer management and telemarketing teams

Education

Five Towns College

Audio Engineering / Business Management

1998 - 2000

Stony Brook University

Business Management

2000 - 2001
